

How to use the Bednorz K Protector

The Bednorz K Protector has been developed to ensure the safe removal of bolt seals. When they are cut, fragments can fly off, potentially endangering personnel and equipment. The user-friendly Bednorz K Protector prevents uncontrolled movement of the severed parts, which reduces the potential for accidental injury or damage. After cutting, both parts of the seal remain securely attached to the Bednorz K Protector, making them easy to inspect, dispose of or store. Damage caused by any sharp seal fragments, e.g. to HGV tyres, will also be avoided.

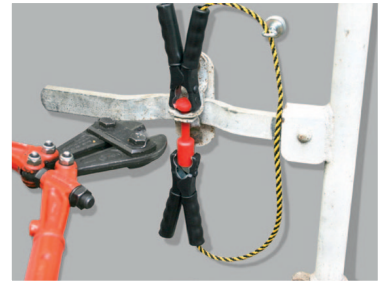

-
- 1 Attach magnet to metal surface of container or truck door. Affix one alligator clip of the Bednorz K Protector to the top of the bolt seal and one to the bottom.

-
- 2 This photograph shows a correctly fitted Bednorz Protector K.

3 The bolt seal can now be cut safely with bolt cutters.

4 The fragments of the bolt seal remain reliably secured by the two alligator clips.

5 Both seal parts can now be easily removed.
