

How to apply the Bednorz-Seal

- 1 Pull the seal through the openings that are to be secured.

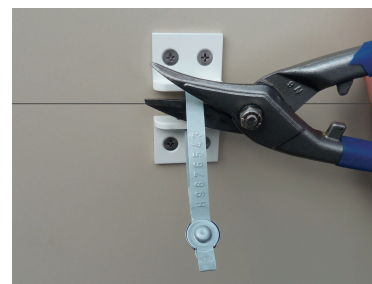

- 2 Bend the top of the strap downwards and position the pin in the oval slot.

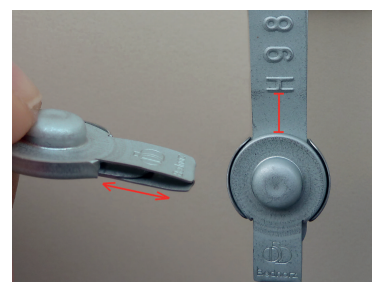

- 3 Fold the seal at the point where it is marked "> <". Press both parts of the seal head together, until there is an audible "click".

- 4 The seal should only be removed by authorised personnel using appropriate tools, e.g. tin snips.

- 5 **Checking that the seal has been correctly fitted**
At least 5mm of unmarked strap head should be visible between the seal head and the embossed section of the strap. The end of the strap should also be **clearly visible** from the side of the sealhead and should **move freely** within the oval slot.
